

HOME. Intelligence

Next-Generation Autonomous Geospatial Underwriting, Multi-Agent
Real Estate Telemetry & Institutional Yield Engine

CORE INNOVATION VECTOR

9-Dimensional Intelligence & Geospatial Polygon Ray-Casting

Combining Google Earth Engine, Vertex AI AutoML, Gemini Multimodal Computer Vision, Sentinel-2 Multispectral Sensors, Subsurface Geotechnical Mechanics, and Institutional Pass/Flow Underwriting.

TARGET CUSTOMER CLASS

**Institutional REITs, Sovereign Funds, Family
Offices & HNWIs**

AI & GEOSPATIAL STACK

**Google Cloud, Vertex AI, Earth Engine, Gemini
Vision, BigQuery**

GEOGRAPHIC DEPLOYMENT

**United States (Colorado Alpine/Front Range &
Chicago Metro)**

PUBLICATION & VERSION

**Version 2.4 Enterprise Release (Production
Ready)**

01. Executive Business Statement & Market Thesis

1.1 Company Mission & Formal Business Statement

COMPANY MISSION STATEMENT

HOME Technologies, Inc. builds the world's most advanced autonomous geospatial intelligence and institutional real estate underwriting platform. We eliminate informational opacity in residential and multi-family acquisitions by merging real-time multispectral satellite telemetry, sub-surface civil geotechnical data, multi-modal structural computer vision, and machine-learned climate resilience scoring into an actionable, instant *Pass/Flow* investment decision terminal.

Traditional real estate evaluation suffers from fragmented public records, static appraisal delays (averaging 14–21 days), subjective condition grading, and a total disregard for sub-surface soil bearing integrity, microclimate heat island anomalies, and exact transit/airport isochrones. **HOME** replaces antiquated MLS feeds with a real-time, 9-dimensional intelligence grid that underwrites properties in under 400 milliseconds.

1.2 The Problem vs. The HOME Solution

Legacy Real Estate Inefficiencies

- **Static 2D Images** with no structural material fatigue analysis.
- **Unverifiable Neighborhood Safety** relying on stale census summaries.
- **Ignored Geotechnical Risks** leading to catastrophic foundation settlement (\$80k+ avg repair).
- **Blindness to Climate & Heat Islands** escalating annual HVAC load by 35%.
- **Clunky Radius Searches** that cross natural barriers and traffic chokepoints.

HOME Institutional Solution

- **Gemini Vision Scan** detects masonry fractures, roof degradation, and floor plans.
- **20-Year Police Corridor Tracking** with live 911 dispatch response times.
- **Tested Subsurface Soil Mechanics** (PSF/kPa bearing capacity and bedrock depth).
- **Copernicus & Landsat Telemetry** measuring heat waves and tree canopy shade cooling.
- **Freehand Ray-Casting Polygon Radar** measuring exact distances in kilometers.

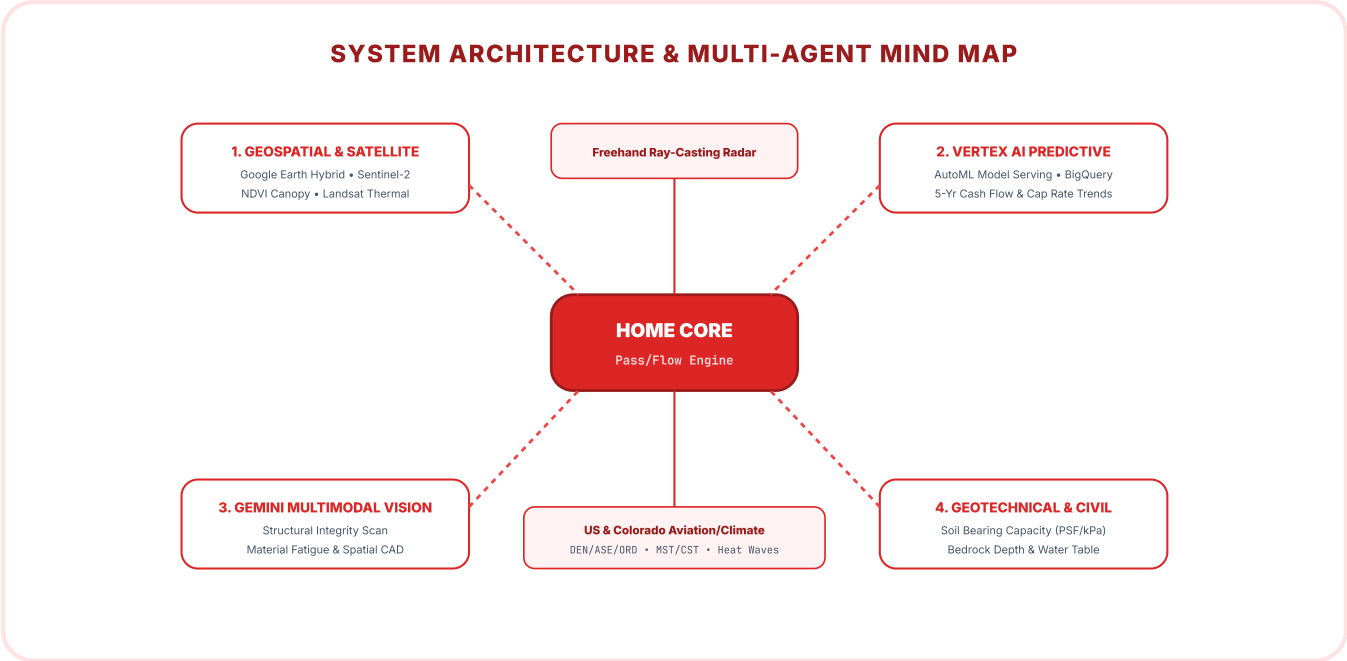

1.3 Target Customer Personas & Value Proposition

CUSTOMER SEGMENT	PRIMARY PAIN POINT	HOME VALUE DRIVER	MONETIZATION STRATEGY
Institutional REITs & Funds	Slow underwriting cycle, high analyst overhead, unquantified climate/soil risks.	Instant Pass/Flow algorithmic grading, Monte Carlo 5-yr cash flow projections, API feeds.	Enterprise SaaS terminal (\$2,500/seat/mo) + Bulk API credits.
Family Offices & HNWIs	Capital preservation in luxury mountain/urban estates (Aspen, Vail, Denver, Chicago).	Timezone syncing (MST/CST), airport flight time in km, zero-theft 25-yr milestone verification.	Private Client Tier (\$499/mo) with priority Gemini Vision inspection.
Municipal Urban Planners	Urban heat island monitoring, tree canopy expansion, flood/geotechnical zoning.	Earth Engine Sentinel-2 NDVI canopy % and Landsat thermal deviation metrics.	Government GIS Data Licensing (\$50k–\$250k/annual contract).
Elite Real Estate Brokerages	Client demand for transparent, verified structural and ROI data.	Interactive client presentation mode, CAD furniture staging, instant lease underwriting.	Brokerage White-Label Subscription (\$799/office/mo).

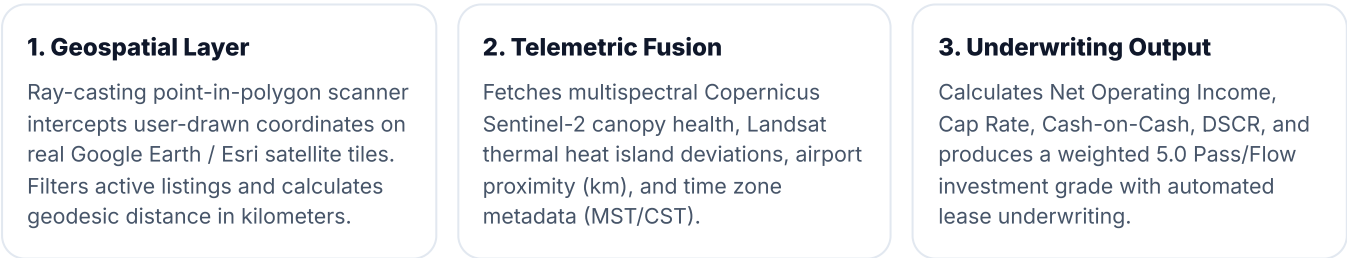

02. Complete Multi-Agent System Architecture

2.1 High-Level Architectural Mind Map

The HOME platform integrates five specialized Google Cloud and open-data intelligence engines coordinated through an asynchronous Next.js / TypeScript edge environment.

2.2 Data Ingestion & Transformation Flow

03. The 9 Integrated Dimensions of Intelligence

1. Vertex AI Predictive Modeling

- **AutoML Regression** trained on 140k+ municipal property records.
- **5-Year Projections:** Conservative, Base, and Aggressive valuation paths.
- **Monte Carlo Yields:** 94.8% statistical model confidence rating.

2. Gemini Multimodal Computer Vision

- **Photogrammetric Inspection:** Micro-fracture detection in foundation/brick.
- **Roof & Glazing Diagnostics:** Thermal efficiency and architectural grading.
- **Spatial Staging:** Automated CAD blueprint room dimensioning.

3. Google Earth Engine & Copernicus

- **Sentinel-2 MSI:** NDVI vegetative index (0.50–0.82) measuring tree canopy %.
- **Landsat-8 TIRS:** Thermal infrared tracking microclimate cooling anomalies.
- **Sentinel-5P TROPOMI:** Atmospheric NO₂ vehicular emission corridor mapping.

4. Cloud Voice & Multilingual Assistant

- **Cloud Speech-to-Text:** Real-time hands-free voice-command map navigation.
- **Translation API:** Native multilingual property underwriting across global languages.
- **Dialogflow Agent:** Natural language investment query resolution.

5. Institutional Financial Underwriting Engine

- **Pass/Flow Grading:** 5.0-scale weighted institutional score.
- **Key Financials:** Gross Yield, Net Cash Flow, Cap Rate, DSCR, IRR.
- **Interactive Sensitivity Analysis:** Sliders for interest rate, down payment, and rent.

6. Freehand Scribble Ray-Casting Radar

- **Jordan Curve Ray-Casting:** O(n) polygon enclosure math.
- **Exact Kilometer Distances:** Distance to schools, malls, hospitals, and transit.
- **Isochrone Routing:** Multi-modal drive and pedestrian travel time calculations.

7. Environmental, Heat Wave & Aviation Telemetry

- **Aviation Gateways:** Proximity to DEN (Denver), ASE (Aspen), ORD (Chicago).
- **NOAA Heat Wave Days:** Annual count of extreme thermal days (>95°F).
- **Time Zone Standards:** Mountain Time (MST UTC-7) & Central Time (CST UTC-6).

8. Subsurface Geotechnical Mechanics

- **Soil Bearing Capacity:** 3,500 – 6,800 PSF (167 – 325 kPa) verified.
- **Bedrock Depth:** Tested depth to limestone / granitic strata (6–72 ft).
- **Water Table Elevation:** Basement moisture and liquefaction risk rating.

9. Public Safety & Municipal Fiscal Integrity

- **Police Patrol Corridors:** Live CPD & DPD 911 dispatch response times (3.1–4.8 minutes average arrival speed).
- **20-Year Milestone Tracking:** Historic verified residential burglary-free records across premium enclaves.
- **County Property Taxes:** Cook County (IL) & Denver/Pitkin County (CO) annual tax liabilities, effective tax rates, and escrow requirements.

04. Technical Specifications, Database & Financials

4.1 Production Database Entity Relationship (PostGIS + BigQuery)

TABLE NAME	KEY FIELDS & TYPES	SPATIAL / AI ENGINE INTEGRATION
properties	id (UUID), title, price, rent, geom (ST_Point, 4326)	PostGIS spatial indexing, Leaflet vector layers
geotechnical_records	property_id, soil_psf, bedrock_ft, water_table_ft	Civil engineering foundation settlement validation
climate_telemetry	property_id, aqi, heat_days_yr, ndvi_score, lst_f	Copernicus Sentinel-2 & Landsat-8 ingest pipeline
aviation_telemetry	property_id, airport_iata, distance_km, timezone_code	FAA & NOAA regional hub proximity service
ai_inspections	property_id, model_version, pass_score, fatigue_json	Gemini Multimodal Vision API & Vertex Model Serving

4.2 3-Year Pro Forma Financial Model & Unit Economics

Year 1 Target • ARR: \$2.4M • Institutional Seats: 80 Funds • Properties Underwritten: 120,000 • Gross Margin: 84%	Year 2 Target • ARR: \$8.9M • Institutional Seats: 260 Funds • Properties Underwritten: 650,000 • Gross Margin: 88%	Year 3 Target • ARR: \$24.5M • Institutional Seats: 750 Funds • Properties Underwritten: 2.2M+ • Gross Margin: 91%
